

Project Design Phase
Proposed Solution

Date	7 th July 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Healthcare data contains valuable information, but it is often difficult to analyze through raw datasets. The project aims to provide an interactive dashboard that helps users easily understand heart disease trends and identify major risk factors.
2.	Idea / Solution description	Develop an interactive Tableau dashboard using the Heart_new2 dataset to visualize heart disease data through charts, KPIs, filters, dashboards, and stories, enabling easy analysis and informed decision-making.
3.	Novelty / Uniqueness	The solution combines multiple health factors such as age, gender, BMI, smoking, alcohol consumption, physical activity, diabetes, and general health into a single interactive dashboard with filters and visual analytics for better insights.
4.	Social Impact / Customer Satisfaction	The dashboard helps healthcare professionals, researchers, and the general public understand heart disease risk factors, supporting awareness and encouraging data-driven healthcare decisions.
5.	Business Model (Revenue Model)	The dashboard can be offered as a healthcare analytics solution to hospitals, clinics, research organizations, and public health departments through subscription-based services, consulting projects, or customized dashboard development.

6.	Scalability of the Solution	The solution can be expanded by integrating real-time hospital data, larger healthcare datasets, predictive analytics, and additional disease analysis modules. It can also be deployed as a web-based dashboard for broader access.
