

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	7 th July 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Collection	Download Heart_new2 dataset from SkillWallet. Verify dataset structure and fields. Load dataset into Tableau.
FR-2	Data Preparation	Check data types. Create calculated fields (Heart Disease Count, Heart Disease Rate, Current Smokers). Prepare data for visualization.
FR-3	Data Visualization	Create worksheets for heart disease analysis. Develop charts and graphs. Apply filters and interactive features.
FR-4	Dashboard & Story Development	Design interactive dashboards. Create Tableau Story with analysis scenes. Display KPIs and insights for decision-making.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The dashboard provides a simple, interactive, and user-friendly interface with filters, charts, and KPIs, making it easy for users to analyze heart disease data.
NFR-2	Security	The project uses a static dataset (Heart_new2) for analysis. No personal user login or sensitive information is stored or shared.
NFR-3	Reliability	The dashboard consistently displays accurate visualizations and updates results correctly whenever filters are applied.
NFR-4	Performance	Tableau processes the dataset efficiently, providing quick loading, smooth filter operations, and fast visualization updates.
NFR-5	Availability	The dashboard can be accessed whenever the Tableau workbook is opened, ensuring continuous availability for data analysis.
NFR-6	Scalability	The solution can be extended by adding larger datasets, new visualizations, additional calculated fields, or integrating real-time healthcare data in the future.
