

Project Design Phase Solution Architecture

Date	7 th July 2026
Team ID	
Project Name	Heart Disease Analysis
Maximum Marks	4 Marks

Solution Architecture Diagram:

The Heart Disease Analysis system begins by importing the heart disease dataset in CSV format. The data is cleaned and preprocessed by removing missing values, duplicates, and converting data into the required format. The processed data is then analyzed in Tableau to create interactive dashboards and visualizations. Finally, the dashboard provides meaningful insights on heart disease risk factors, patient demographics, lifestyle impacts, and overall trends, helping users make informed healthcare decisions.
